

## 2. Changing the Font 1

There are many ways that you can change the way the font looks in your document.

These tags all work in pairs—of course :-)

Things to try:

1. Make the font bold

**<B>Something bold will show on your screen</B>**

2. Make the font italics

*<I>Something in italics will show on your screen</I>*

3. Underlining text

(not used often because hyperlinks are usually shown by underlining)

<U>Something underlined will show on your screen</U>

<HTML> <BODY>	We know about this stuff
<B>Writing</B>	To do something in bold
<I>Writing</I>	To do something in italics
<U>Writing</U>	To do something underlined
</BODY> </HTML>	We know about this stuff

### NOW YOU TRY:

OPEN Notepad, and make an HTML document.

USE bold, italics and underlined tags

REMEMBER: To use all tags in pairs

VIEW it in your browser.
